

## **IQS master's in chemical engineering students visit the factory of Vila-seca I of Ercros**

Students and professors of the master's degree in chemical engineering from the Institut Químic de Sarrià ("IQS") have visited the Ercros factory in Vila-seca I. Joan Cambra, head of basic chemistry R&D at the company's Tarragona industrial complex, has been in charge of accompanying the group during the visit.

Ercros collaborates with the IQS master's degree by tutoring students who, in their project, are designing a process unit in accordance with the best available techniques.

Ercros is a company committed to disseminating the scientific and technological knowledge that it has acquired over the years of manufacturing chemical products; for this reason, it collaborates in the technical training of students who will enter the labour market with the necessary skills to develop their profession in the industrial sector.
