

## Ercros participates in the Expertia program from the University of Zaragoza

Joaquín Oliva, head of the chlorate, chlorite and anodes area at the Ercros factory in Sabiñánigo, has given a lecture at the University of Zaragoza within the framework of the Expertia programme, an initiative that allows business experience to be incorporated into university curricula.

Oliva, invited by the Department of Inorganic Chemistry of the Faculty of Chemistry of the University of Zaragoza, spoke to the students about the industrial use of catalysis in the production of hydrogen peroxide. Likewise, in his presentation he explained the products that are manufactured in the centre of Sabiñánigo and, more specifically, the manufacturing process of hydrogen peroxide.

Ercros is a company committed to disseminating the knowledge acquired throughout its years of industrial experience, for this reason its technical people collaborate in the training of future generations by participating in conferences, mentoring or master classes.
