

Ercros organizes a scientific experimentation activity for the students of the Saint Therese School in Tortosa

It is never too early to learn the basic principles of chemistry. With this mission, Teresa Puig, laboratory assistant of the R&D department of the intermediate chemicals division of Ercros, travelled to the Saint Therese School in Tortosa to collaborate in a scientific experimentation activity aimed at the centre's P2 students.

33 children participated in the activity "Let's play chemists" and created their own miniature ocean applying concepts such as the dissolution of a solid in a liquid or the difference in density between liquids.

The activity was highly valued by the Saint Therese School teachers, the little scientists enjoyed experimenting with different textures and Teresa Puig described the experience as very rewarding.
