

Ercros participates in a landscape interpretation route along the Tajo

Ercros and Aranjez Sustainable Association participants at a stop on the route

Members of the safety, health, and environment committee of the Ercros' Aranjez factory have participated in a landscape interpretation route around the Tajo River, within the framework of the collaboration that the factory maintains with the Sustainable Aranjez Association.

Along the seven kilometres of the route, representatives of the environmental organization explained the several problems that affect the river and its environment, and highlighted the challenges they face, from combating pollution to promoting sustainable practices to ensure the health of this water resource.

For their part, the Ercros representatives reported on the actions that the factory carries out to alleviate the problems identified, making the visit a forum for exchanging ideas among the participants.

The Sustainable Aranjez Association is an entity that aims to promote sustainability and environmental awareness, mainly in the surroundings of the Tajo River as it passes through Aranjez.
