

## Students from IES Biello Aragón visit Ercros factory in Sabiñánigo

A group of students of the higher degree in automation and industrial robotics from IES Biello Aragón, accompanied by their teachers, visited the Ercros facilities in Sabiñánigo. The educational visit began with a presentation on the company, its centres and production processes, given by the factory's technical staff, followed by a tour of the chlorine-caustic soda plant and the electrical substation, among other essential equipment, which provided the students with a practical view of the concepts studied, which was highly valued.

Ercros reaffirms its commitment to the educational and professional development of schools and hopes to continue this collaboration for the benefit of future generations of students.
