

3 students of Business Administration and Management from the URV visit Vila-seca II

The students and the people they interviewed

Three students of Business Administration and Management from the Universitat Rovira i Virgili (URV), Núria Casellas -daughter of Antoni Casellas, PVC plant operator-, Elsa Salvatierra and Luana Velázquez, visited the Vila-seca II factory for two days as part of their diagnostic work on the quality management system focused on the customer and continuous improvement in a real case.

For their work, the students interviewed Gonzalo Quintilla, head of Operations; Àngel Blasco, head of the VCM and general services plant; Lorena Salvador, laboratory supervisor; and Manel Bertran, Alejandro González and Irene Sabaté, quality technical staff.

We hope that the stay in our facility has been useful to them and they can successfully complete their university work.
