

## Ercros awards the Ercros-Aragón Hydrogen Foundation Prize for the best bachelor's thesis

Ercros has granted the 2025 Ercros-Aragón Hydrogen Foundation Prize for the best bachelor's thesis to Clara Sánchez for her study titled "Analysis of hydrogen transport, storage, and use in mobility applications." The award was presented by Elena Simón, director of the Sabiñánigo plant.

Sponsored by Ercros, the prize includes a financial grant for the author and an honorary diploma for her academic advisors. The ceremony took place in the hall of columns at the Caja Rural Foundation in Zaragoza during the First Aragón Hydrogen Week, in an event presided over by Mar Paños, Director General of Industrial Promotion and Innovation of the Government of Aragón.

This award is part of the Aragón Hydrogen Foundation Prizes, which annually promote research and technological development in hydrogen as an energy source, renewable energies, and decarbonization.

Francisco Gracia, head of the basic chemistry R&D department at Ercros and an evaluator of the submitted works, highlighted the high quality of the applications, reflecting the growing interest and potential of hydrogen in the scientific and technological fields.

During her speech at the ceremony, Elena Simón thanked the Aragón Hydrogen Foundation for its work and congratulated the winner and all participants for contributing to progress toward a more sustainable future.
